

# **Parental leave policies and the gender division of housework.**

By Helene Dearing

## On a national level...

- Several countries implemented leave schemes with the objective of raising gender equality
- E.g. fathers' quotas in Iceland, Sweden, Norway,...

## On a European level...

- Tendency towards the standardization of leave legislation in a gender-egalitarian way
- Most recent council directive from 2010 suggests that at least one of the four months should be non-transferrable (Council Directive 2010/18/EU)

# Previous Literature

**Quantitative empirical literature** studying the effects of leave on mothers' employment and fathers' family work

- The total duration of leave (Misra et al. 2011; Erhel and Guergoat-Larivière 2013; Fuwa and Cohen 2007; Hook 2010).
- The paid duration of leave (Akgunduz and Plantenga 2012; Ronsen and Sundström 2002; Pettit and Hook 2005)
- Leave reserved for fathers (Boll et al., 2014; Kotsadam and Finseraas 2011; Ekberg et al. 2013; Duvander and Johansson 2012; Schober 2014)

Literature focuses more on the analysis of **normative implications** of leave schemes

- One dimension not enough + it needs more comprehensive assessments of leave policies (Gornick and Meyers 2003; Ray et al. 2010; Javornik 2014; Haas and Rostgaard 2011; Ciccia and Verloo 2012; Dearing forthcoming)
- Development of policy indicators based on regulations, but usually do not relate these indicators to outcomes

# My article

**I aim at** connecting these two bodies of literature a bit closer by...

- Going beyond single-dimensional measures
- But still relate leave measures to empirical outcomes on the division of work

**I will use**

- single and multidimensional indicators of leave policies
- relate these to micro-level data on the division of housework in 21 countries

**I add**

- to the literature that studies the relation between leave policies and the division of housework
- methodological contribution: studying how relation btw. leave and housework changes depending on the measure

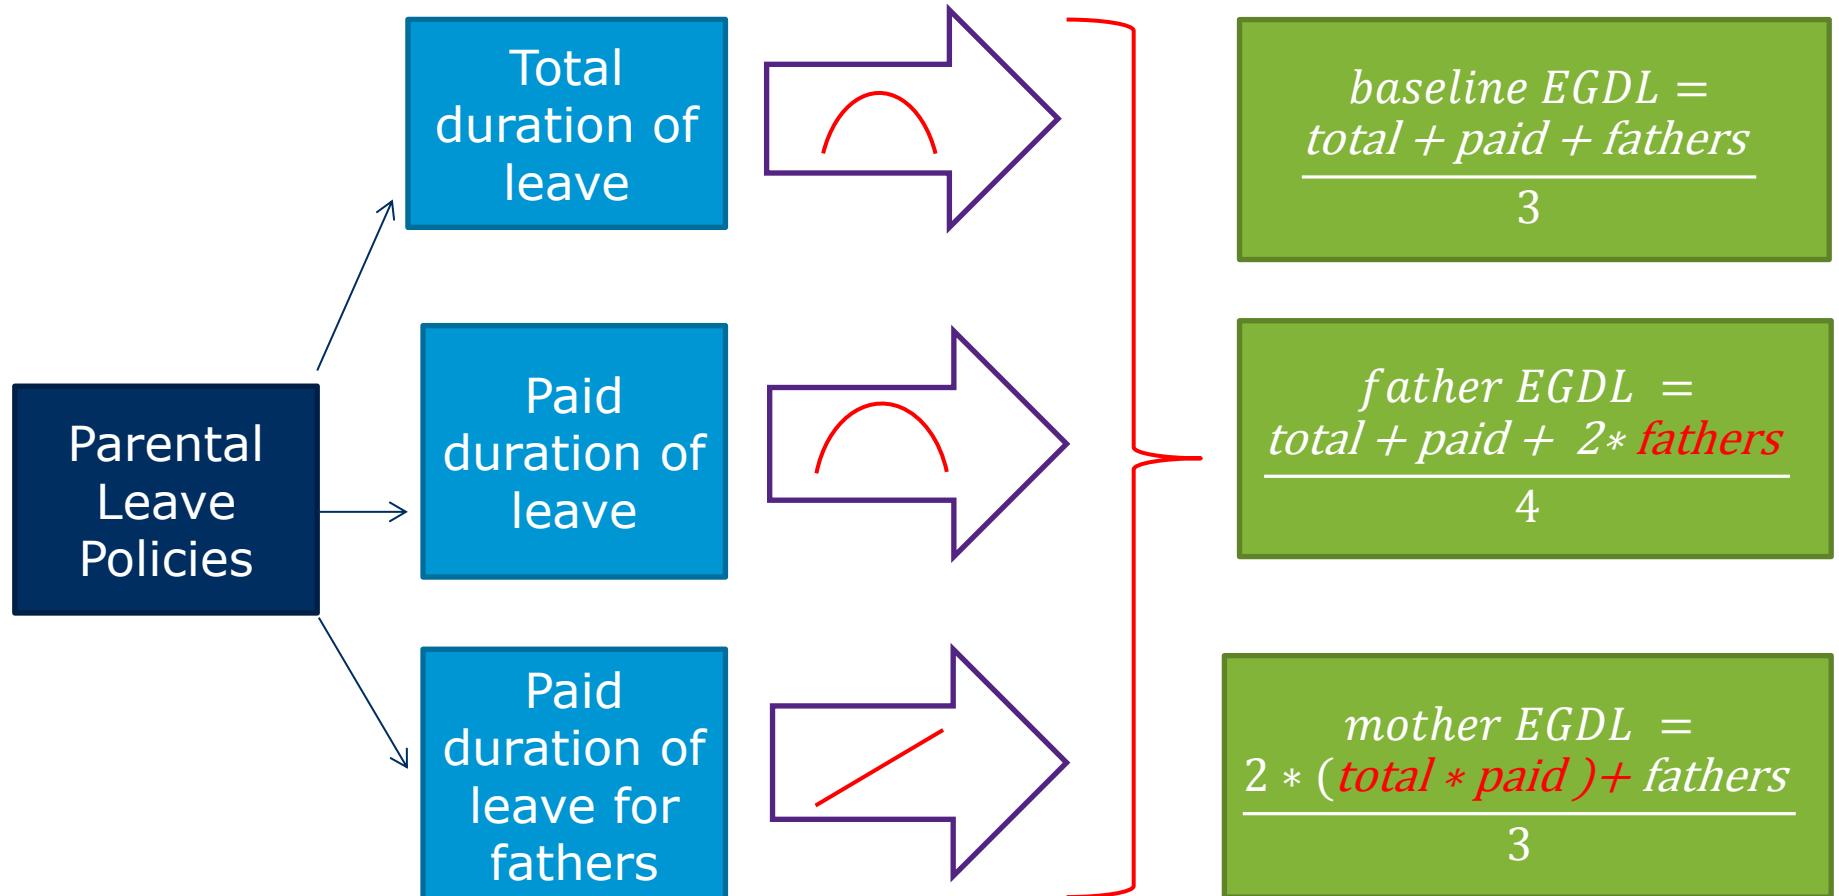

## Parental leave policies

- International Review of Leave Policies and Research for 21 European countries from 2010

## Housework and individual characteristics

- European Social Survey (ESS) for 2010
- Special module: weekly hours spend in housework
- Controls: education, income, employment hours, housework hours of the partner (Stier and Lewin-Epstein 2007; Cooke 2007; Bittman et al. 2003; Fuwa 2004; Fuwa and Cohen 2007)
- Sample: 4,805 parents living with a partner and children under the age of 7

# Single and multidimensional leave measures (Dearing, forthcoming)

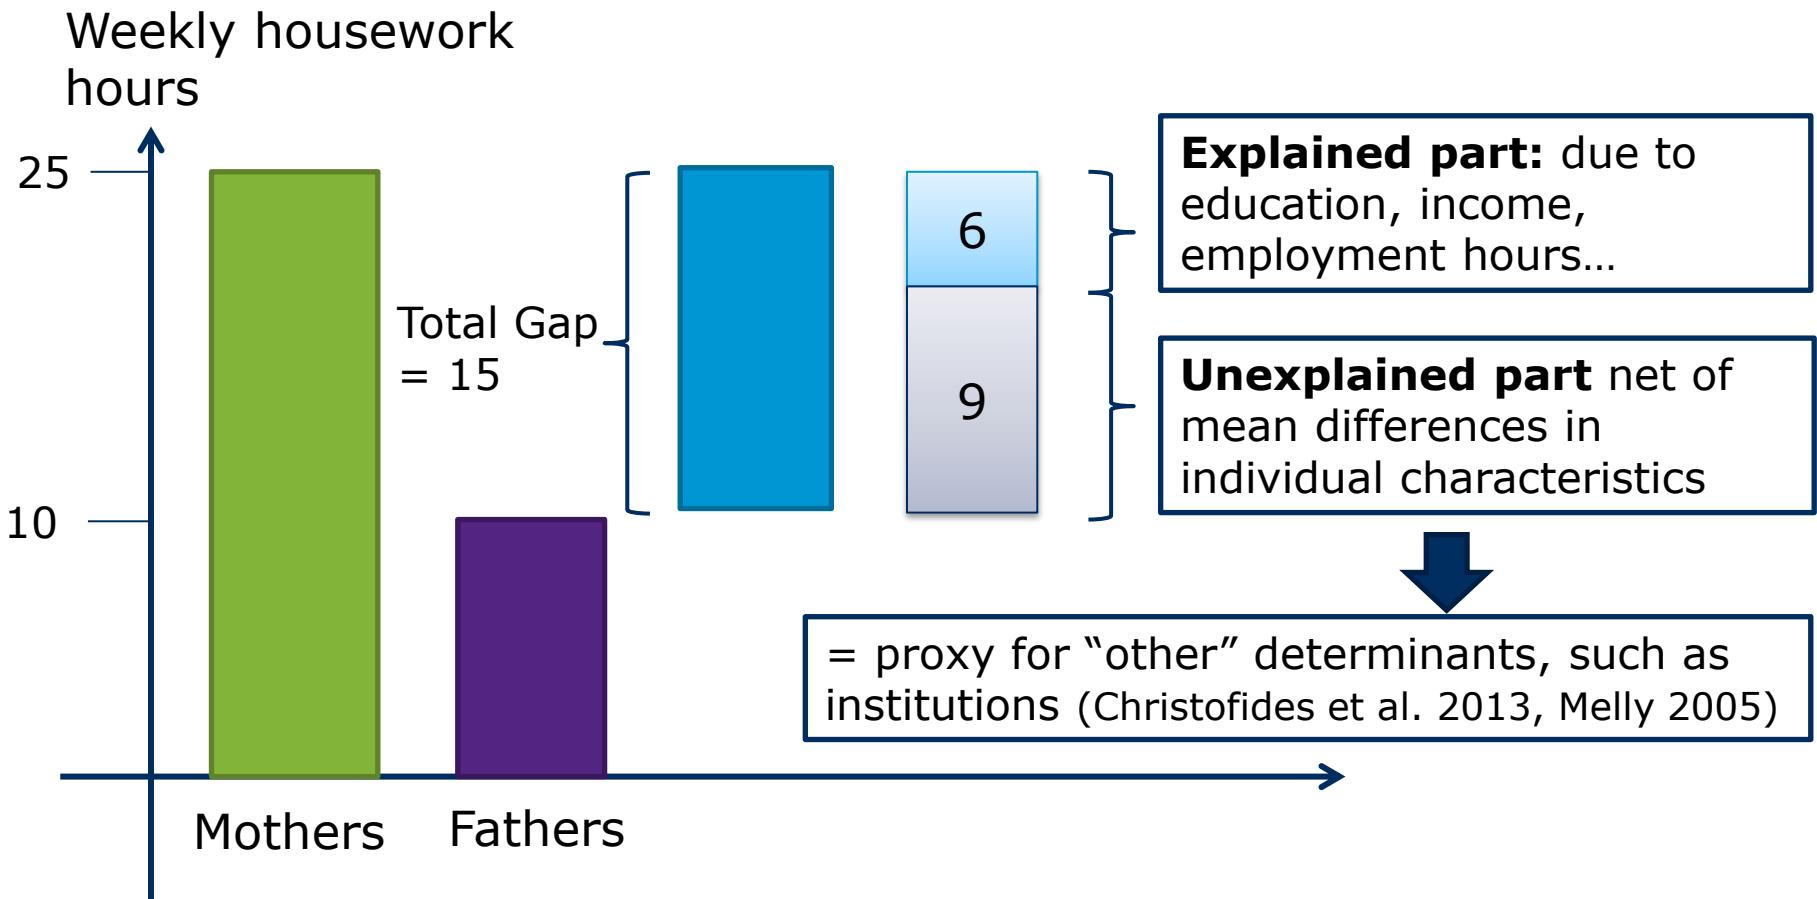

# Relating leave and housework

How to relate leave policies housework data?

- We have data on two levels!
- Blinder-Oaxaca decomposition
- Used in labour economics
- Decomposes mean differences in wages based on linear regression models
- Part that is “explained” by differences in individual characteristics between men and women
- “Unexplained part” (= “other determinants”)

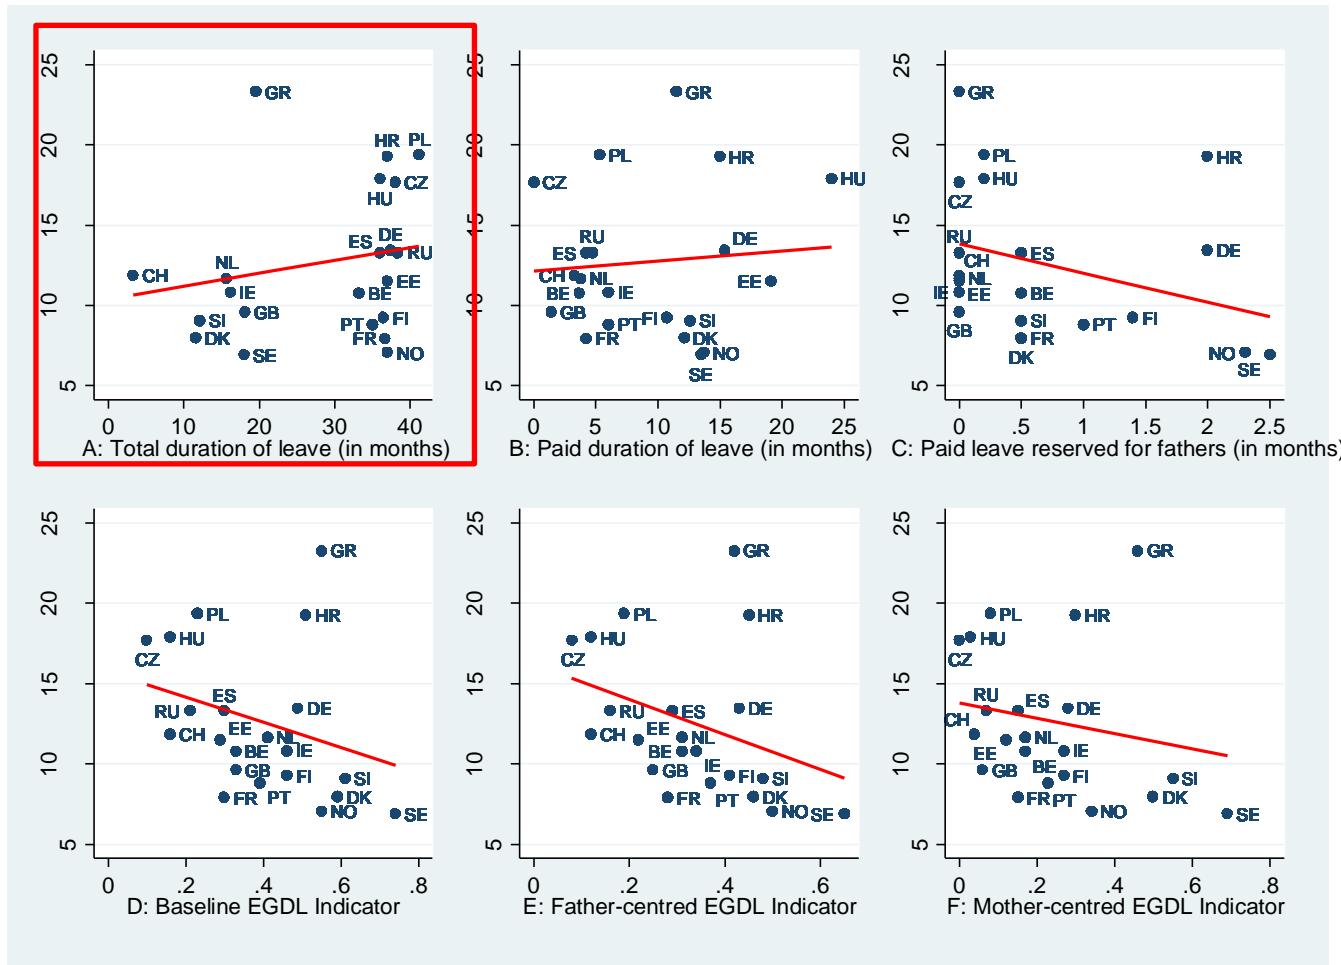

# Blinder-Oaxaca decomposition

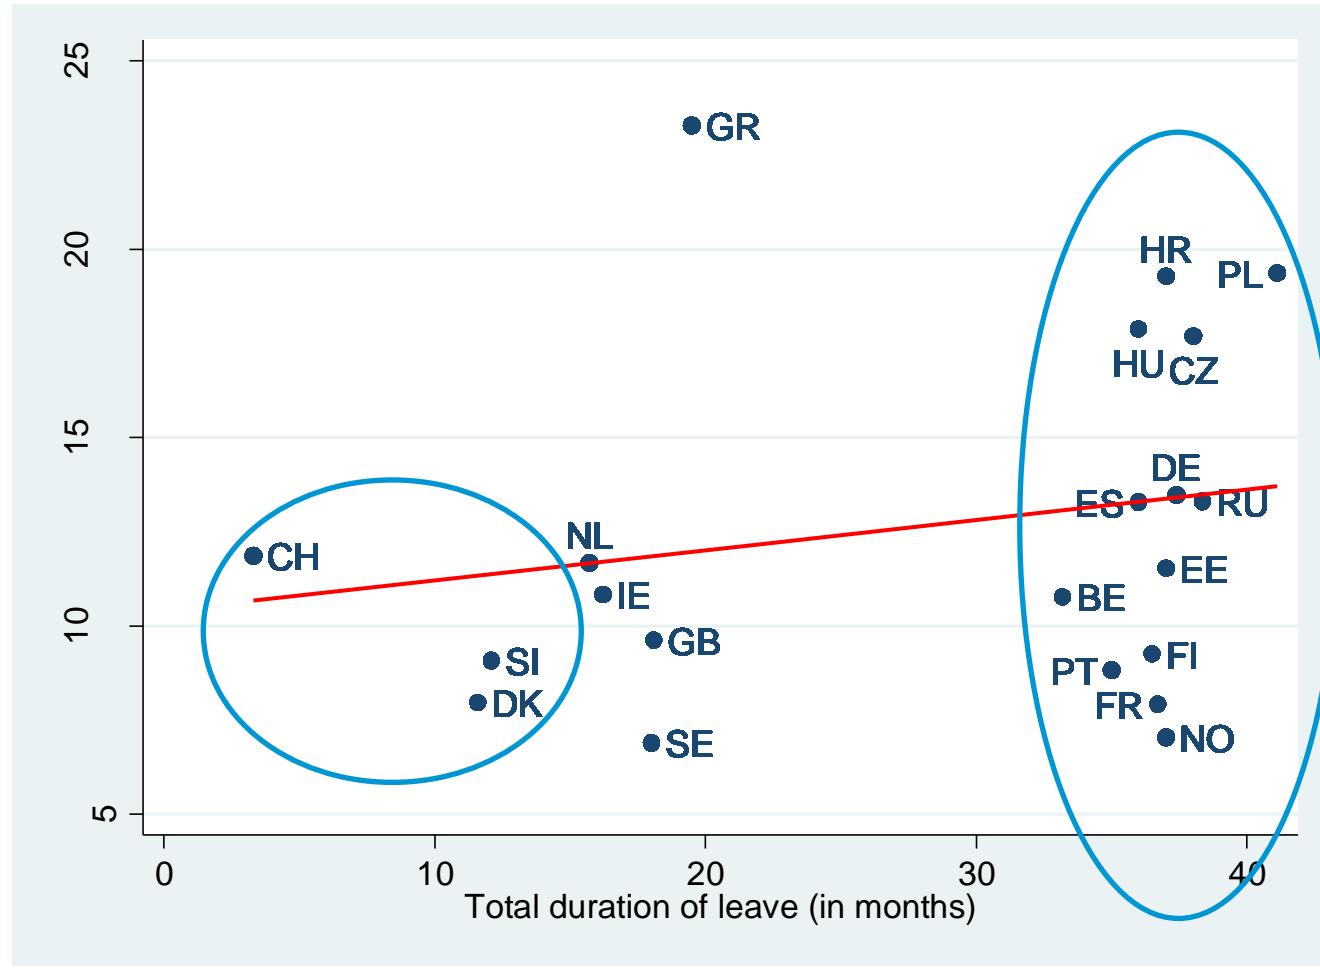

# BO Decomposition for all countries

Countries	Fathers' mean housework	Mothers' mean housework	Gender Gap in Housework	Unexplained part of the Gender Gap
Belgium	8	19	-11	-8
Croatia	10	29	-19	-22
Czech Republic	10	28	-18	-12
Denmark	7	15	-8	-8
Estonia	12	24	-12	-11
Finland	9	18	-9	-8
France	6	14	-8	-7
Germany	8	21	-14	-12
Greece	8	31	-23	-23
Hungary	12	30	-18	-20
Ireland	12	23	-11	-10
Netherlands	9	20	-12	-9
Norway	8	15	-7	-8
Poland	12	32	-19	-15
Portugal	8	17	-9	-7
Russian Federation	14	28	-13	-16
Slovenia	12	21	-9	-11
Spain	8	21	-13	-12
Sweden	11	17	-7	-8
Switzerland	7	18	-12	-9
United Kingdom	8	17	-10	-7

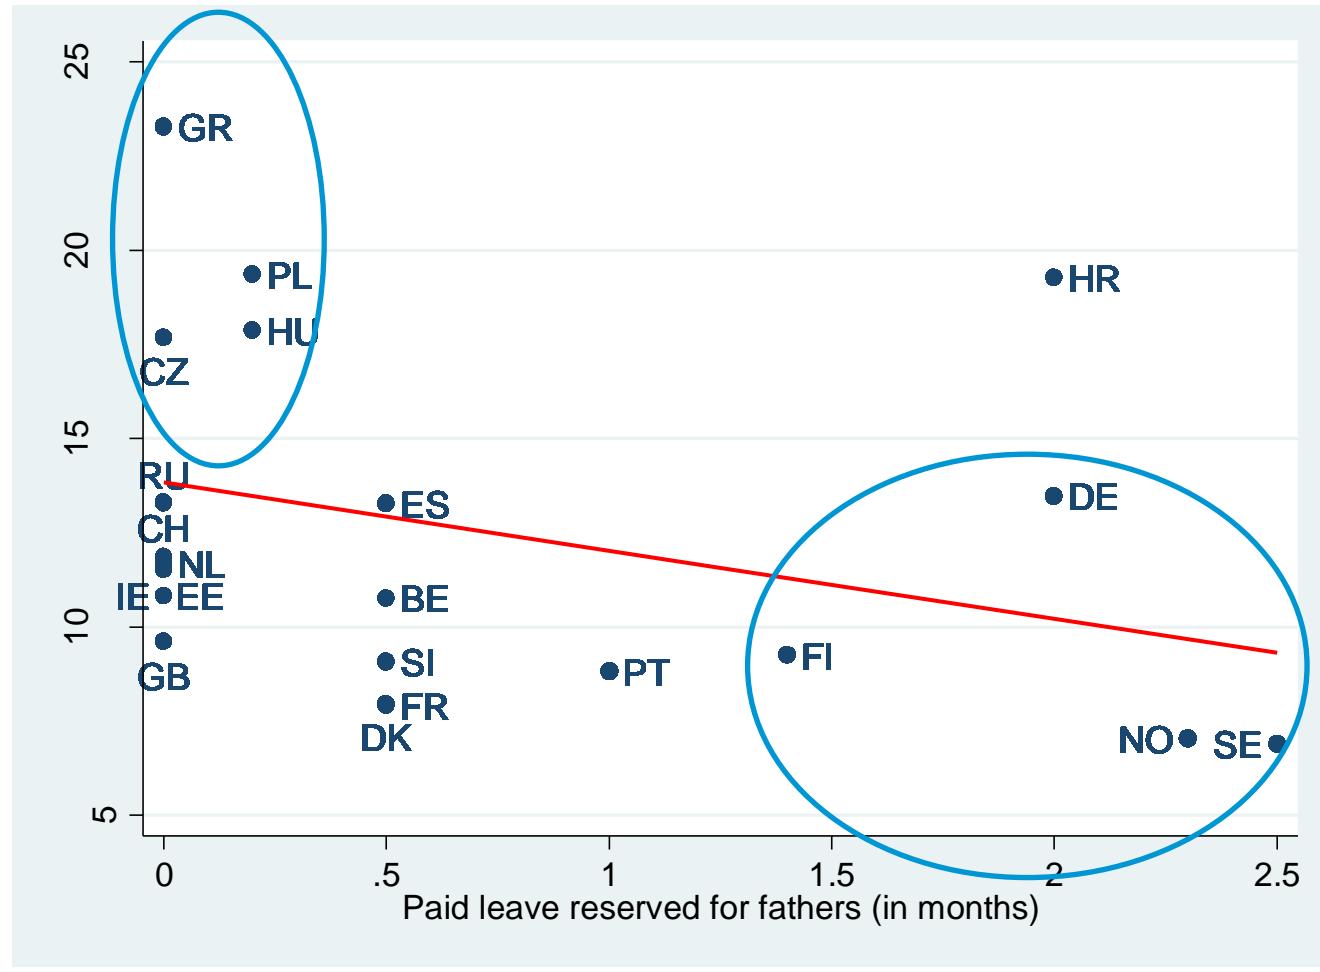

# Total Gender Gap in Housework

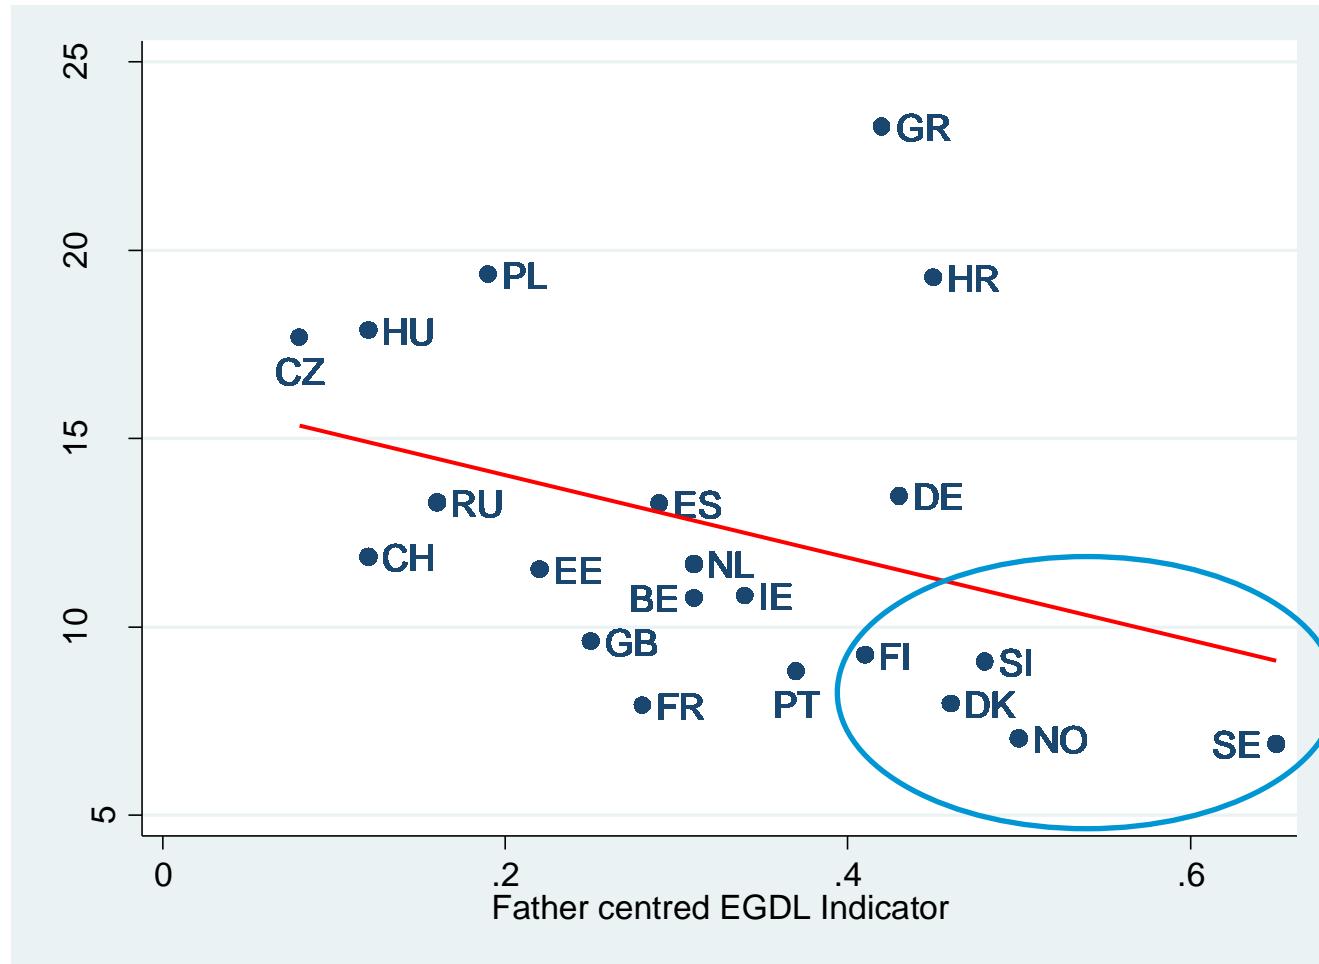

# Total Gender Gap in Housework and total duration

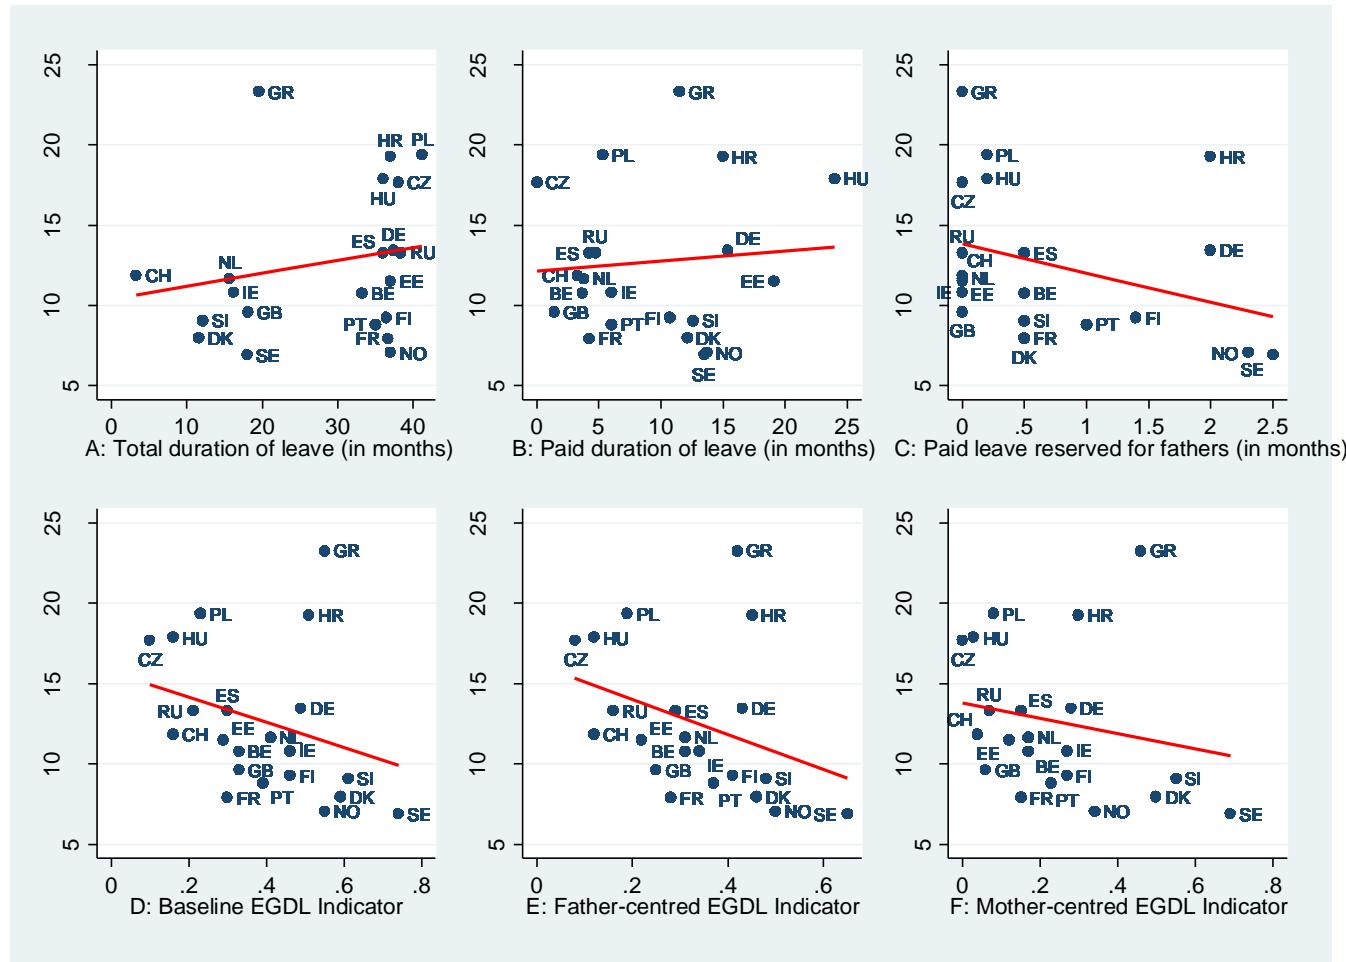

# Total Gender Gap in Housework and fathers' leave

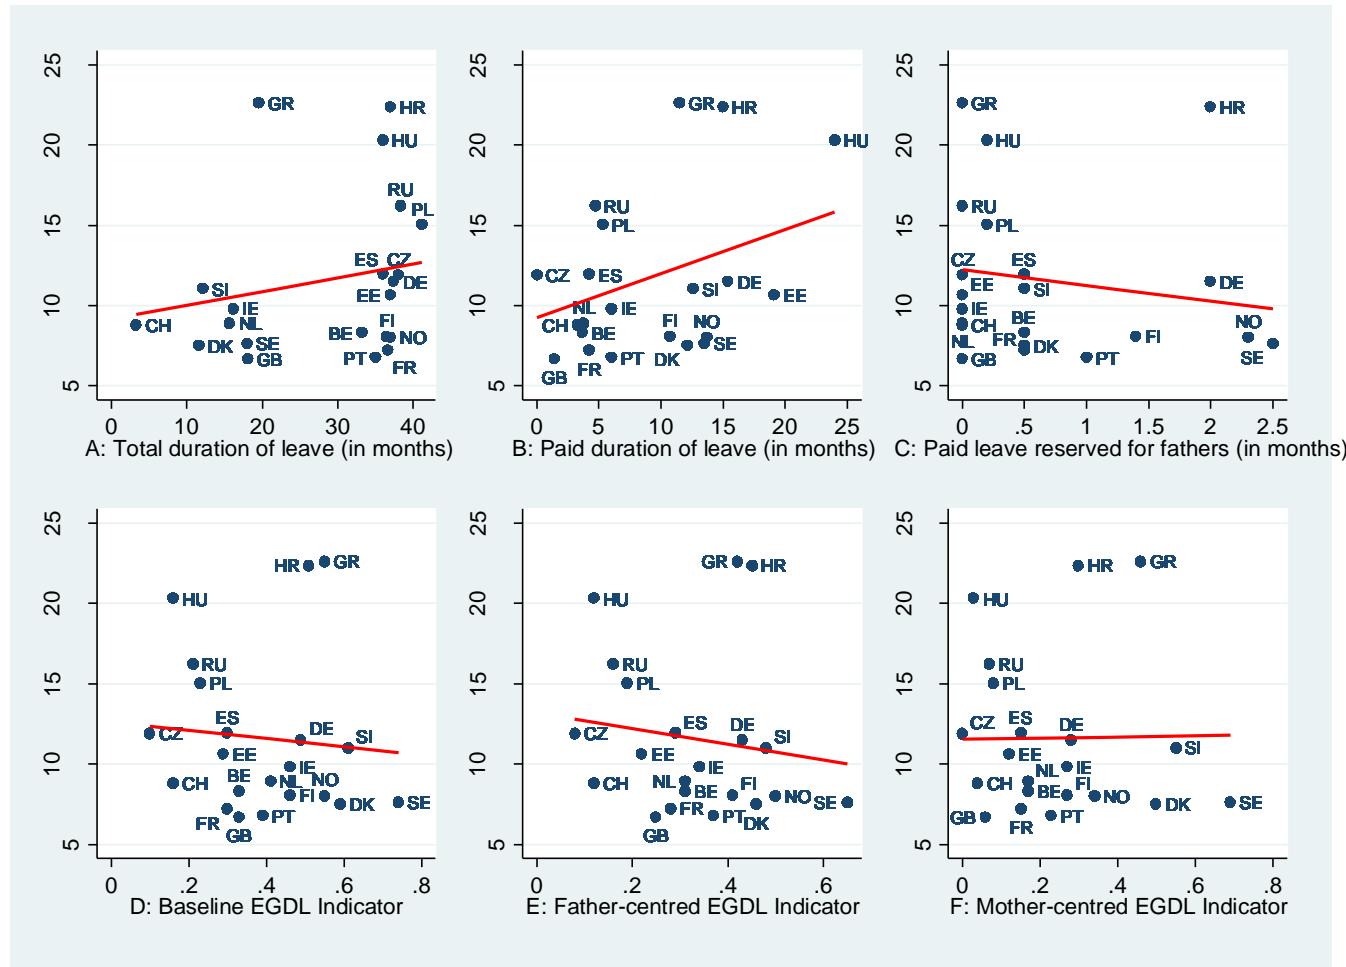

# Total Gender Gap in Housework and father EGDL

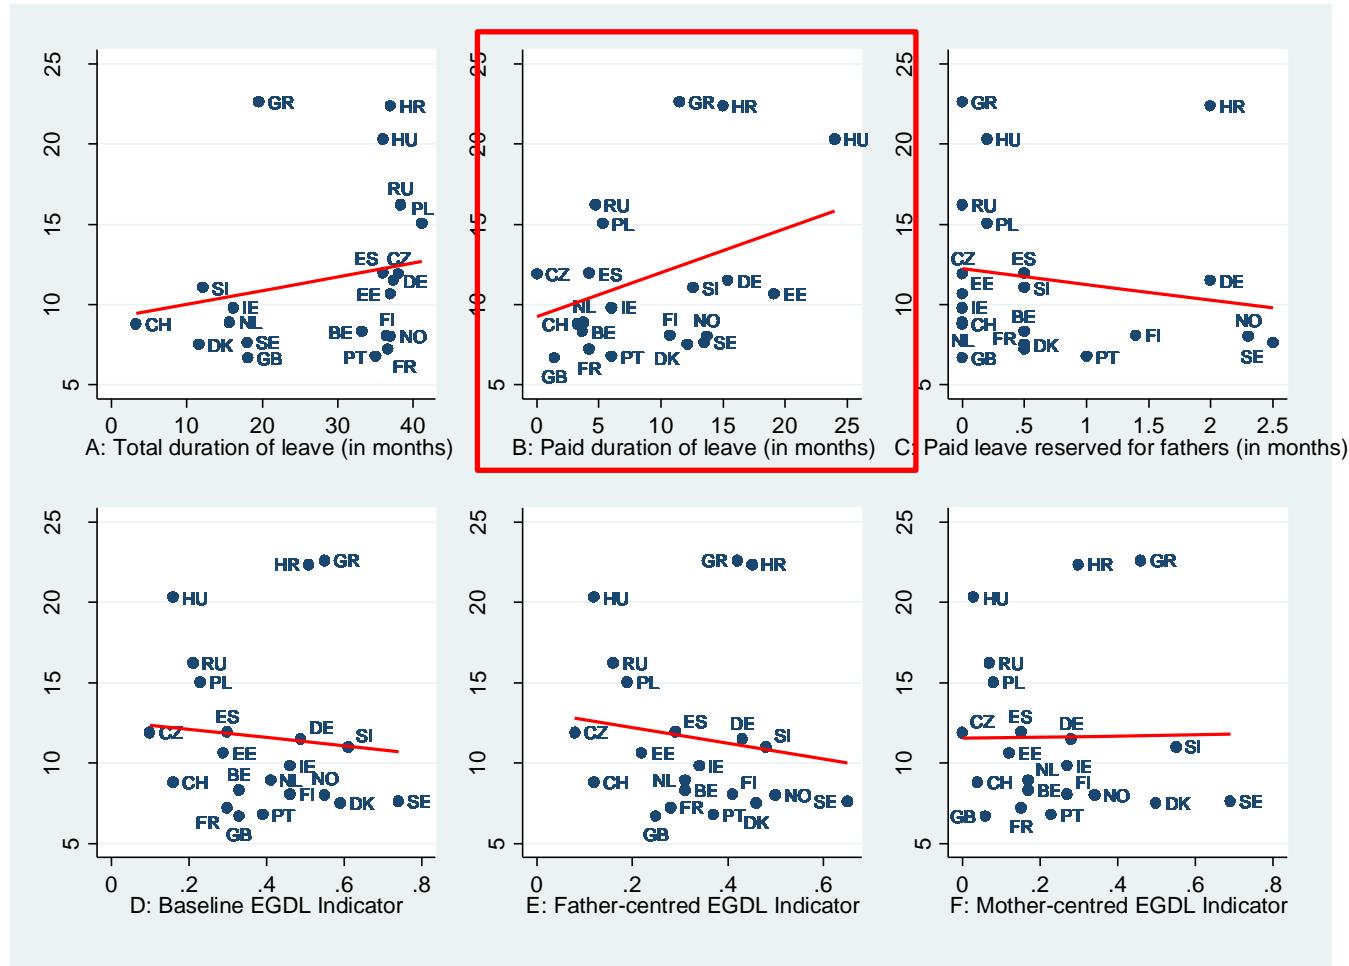

# Total Gender Gap in Housework

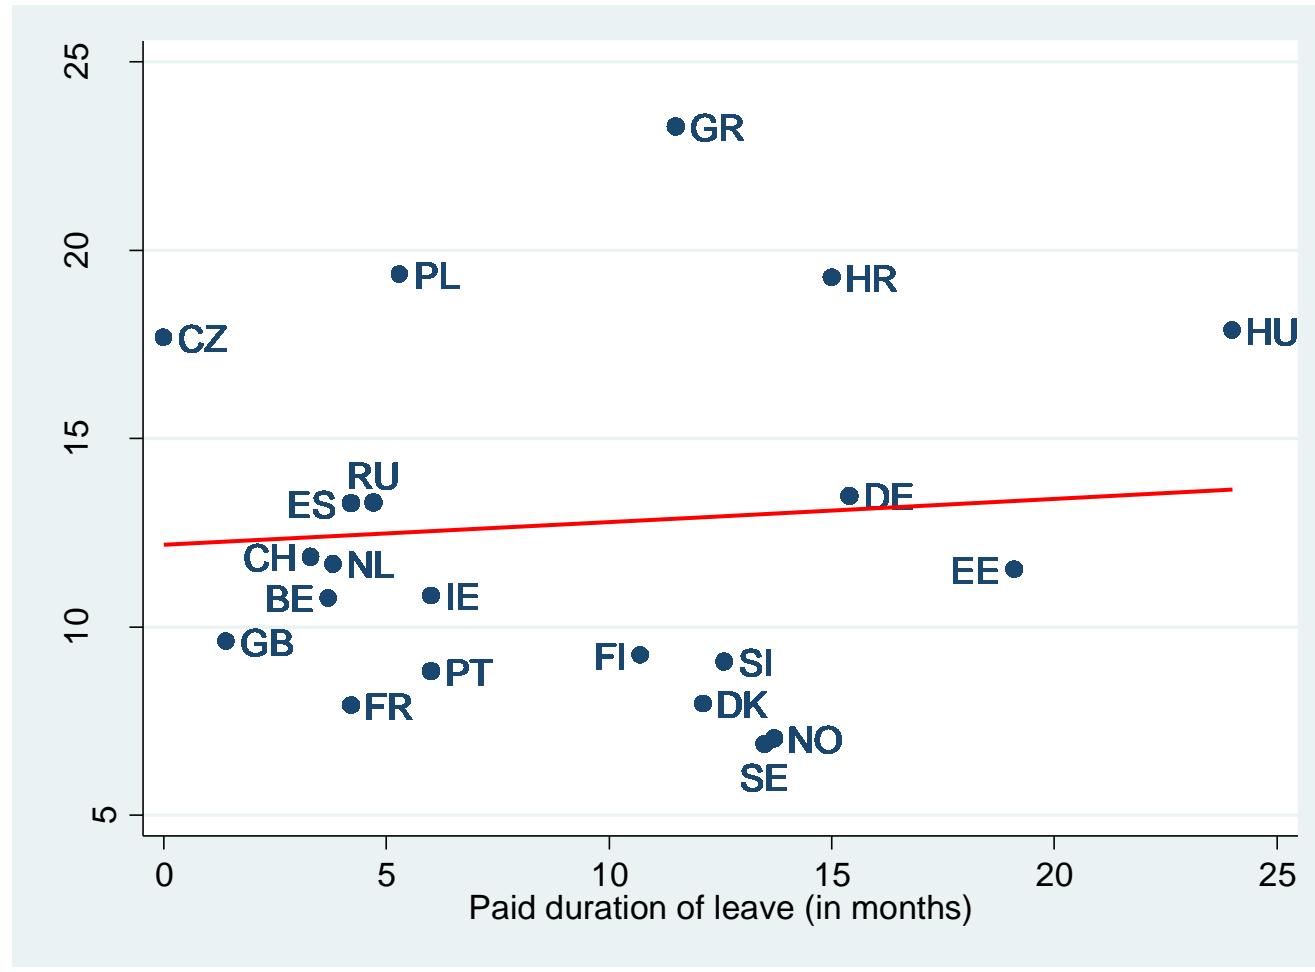

# Unexplained Gender Gap in Housework

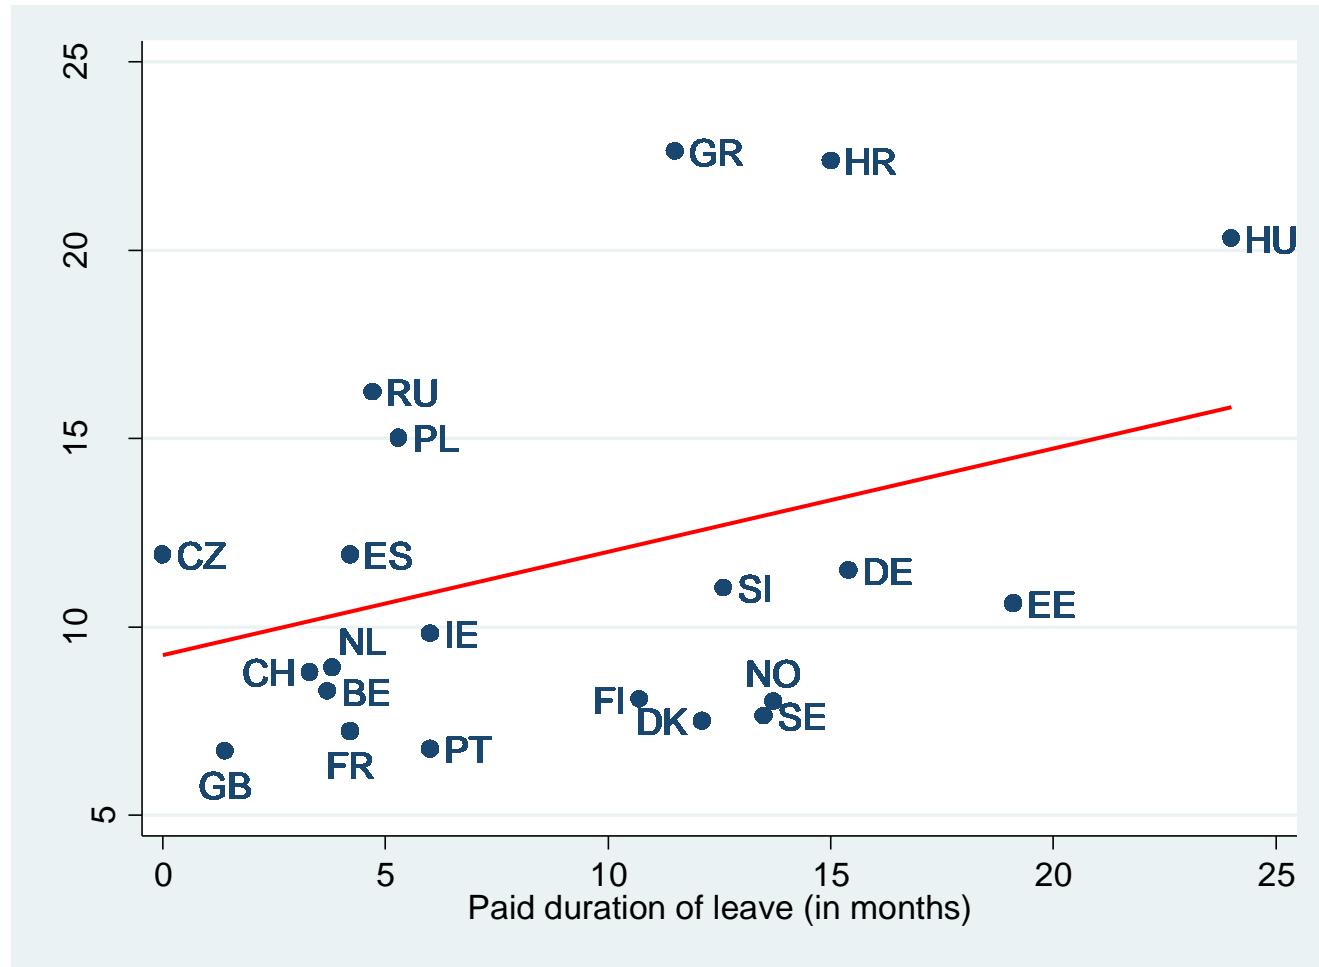

# Unexplained Gender Gap in Housework

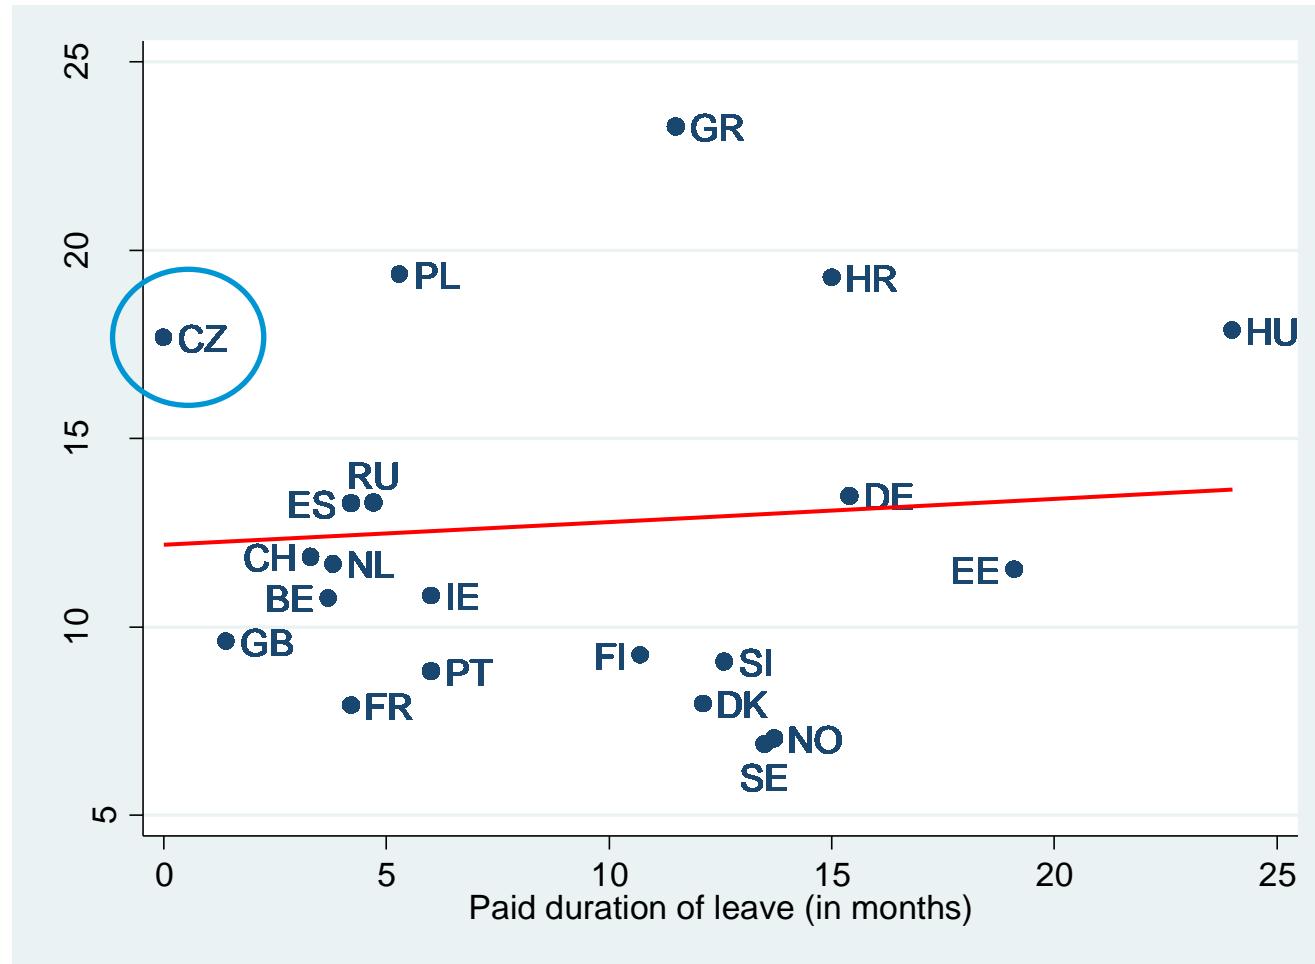

# Total Gender Gap in Housework and paid leave

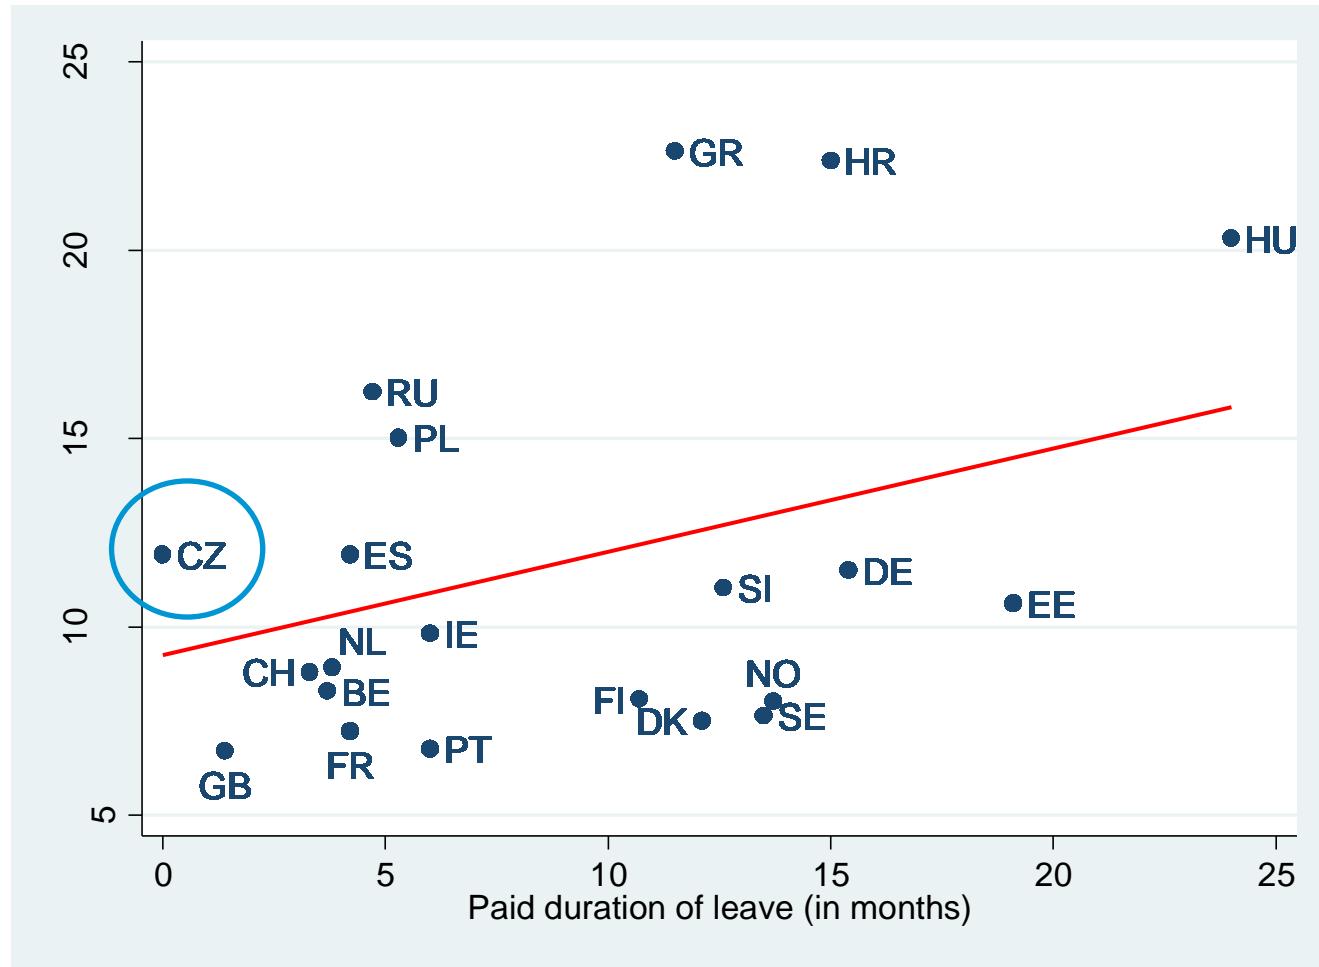

# Unexplained Gender Gap in Housework and paid leave

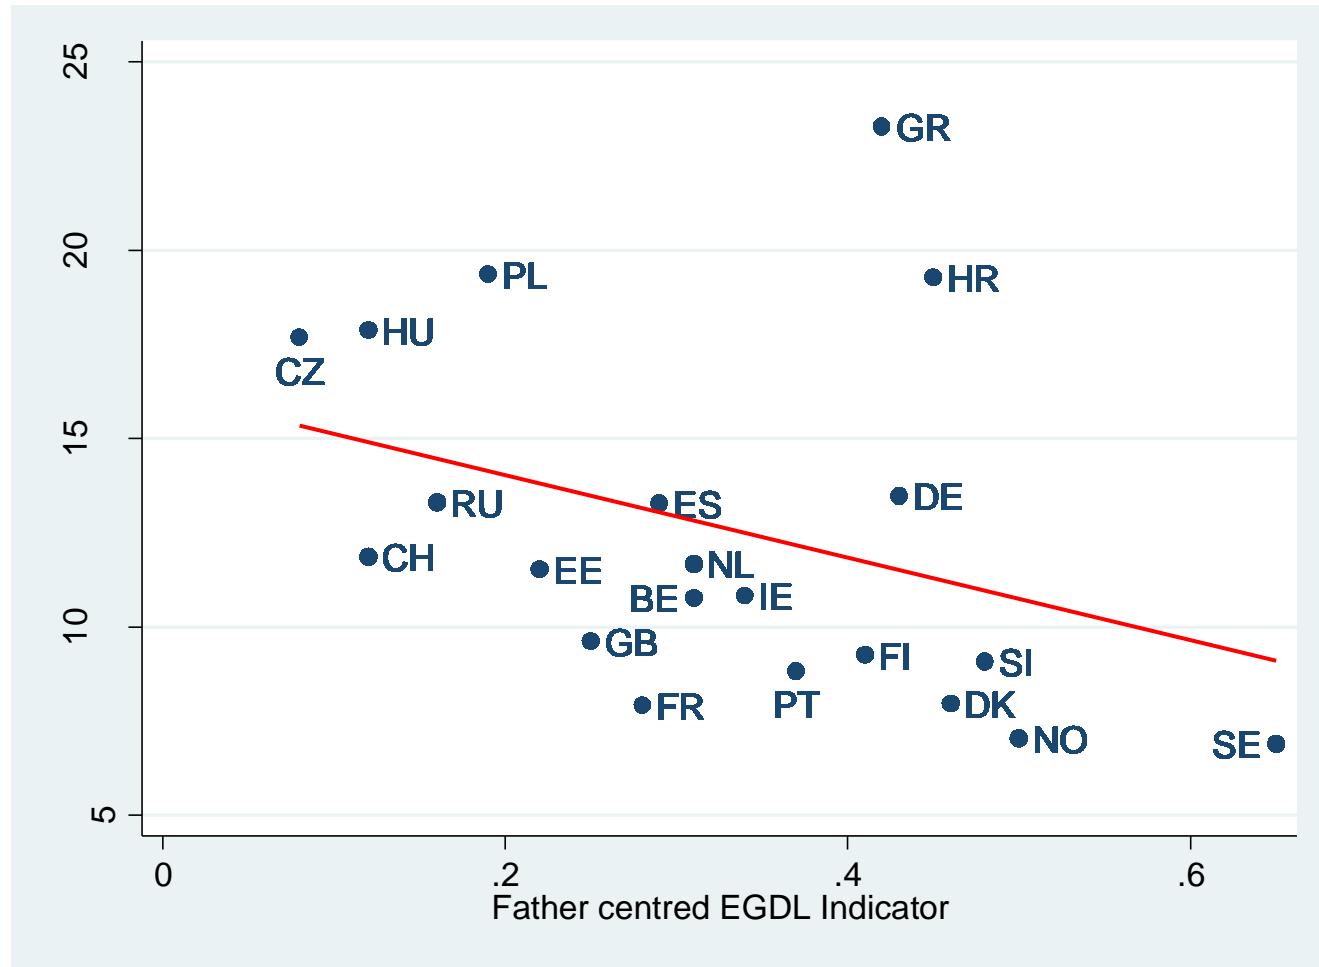

# Total Gender Gap in Housework and paid leave

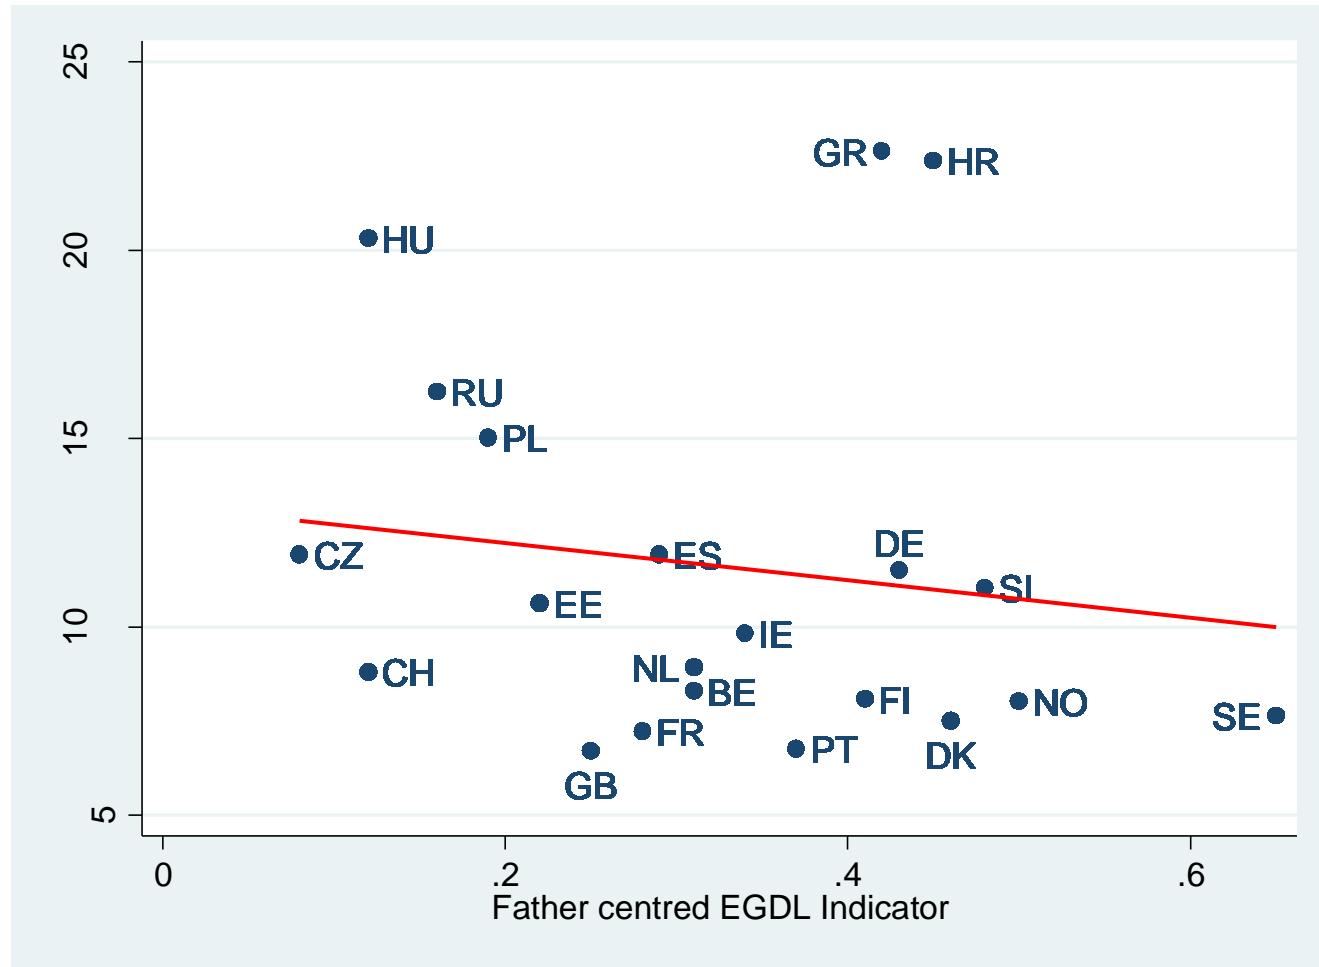

# Unexplained Gender Gap in Housework and paid leave

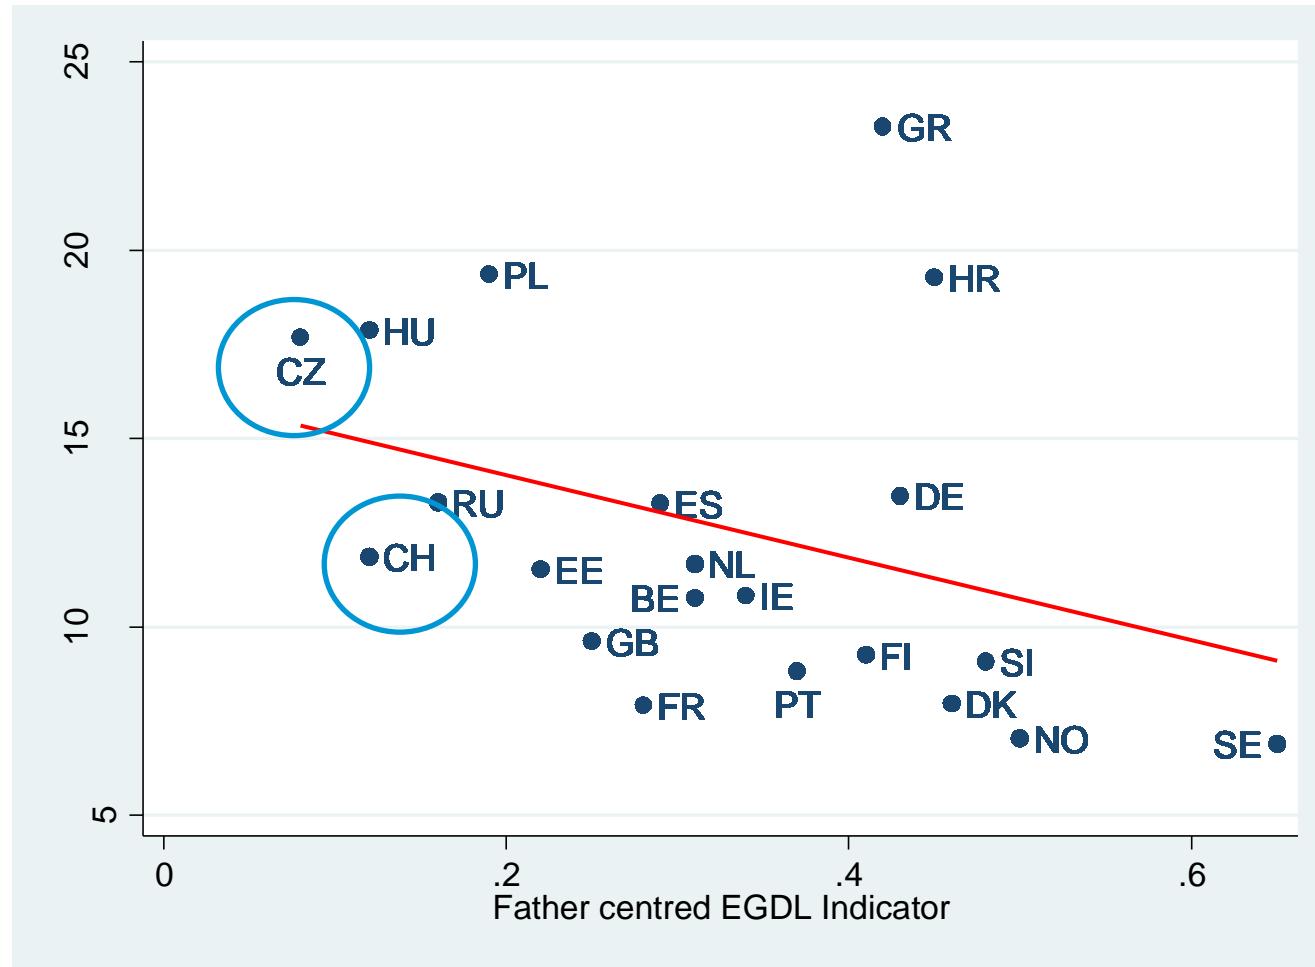

# Total Gender Gap in Housework and Father EGDL

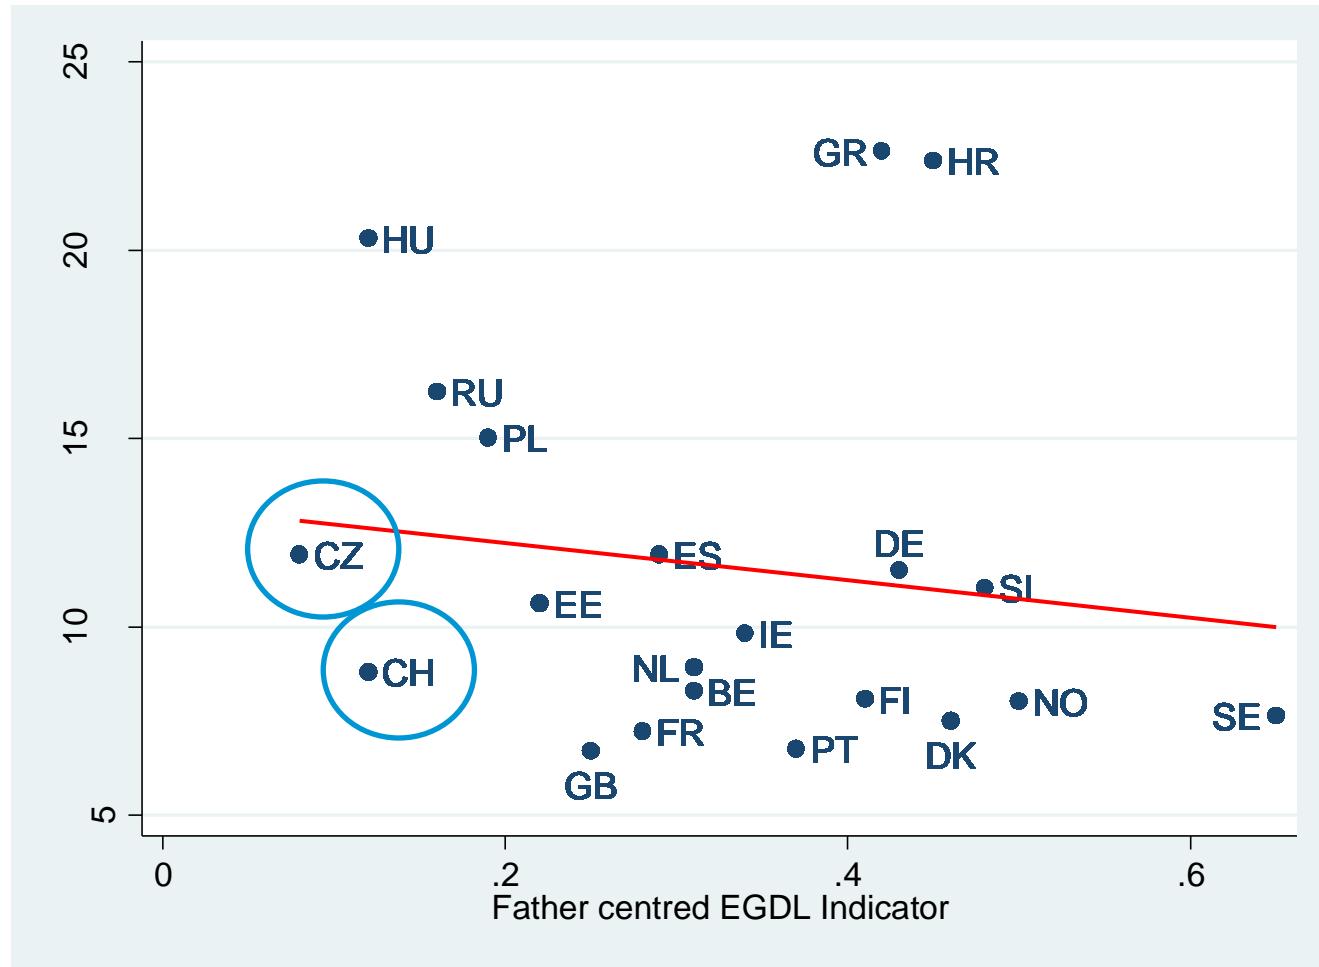

# Unexplained Gender Gap in Housework and Father EGDL

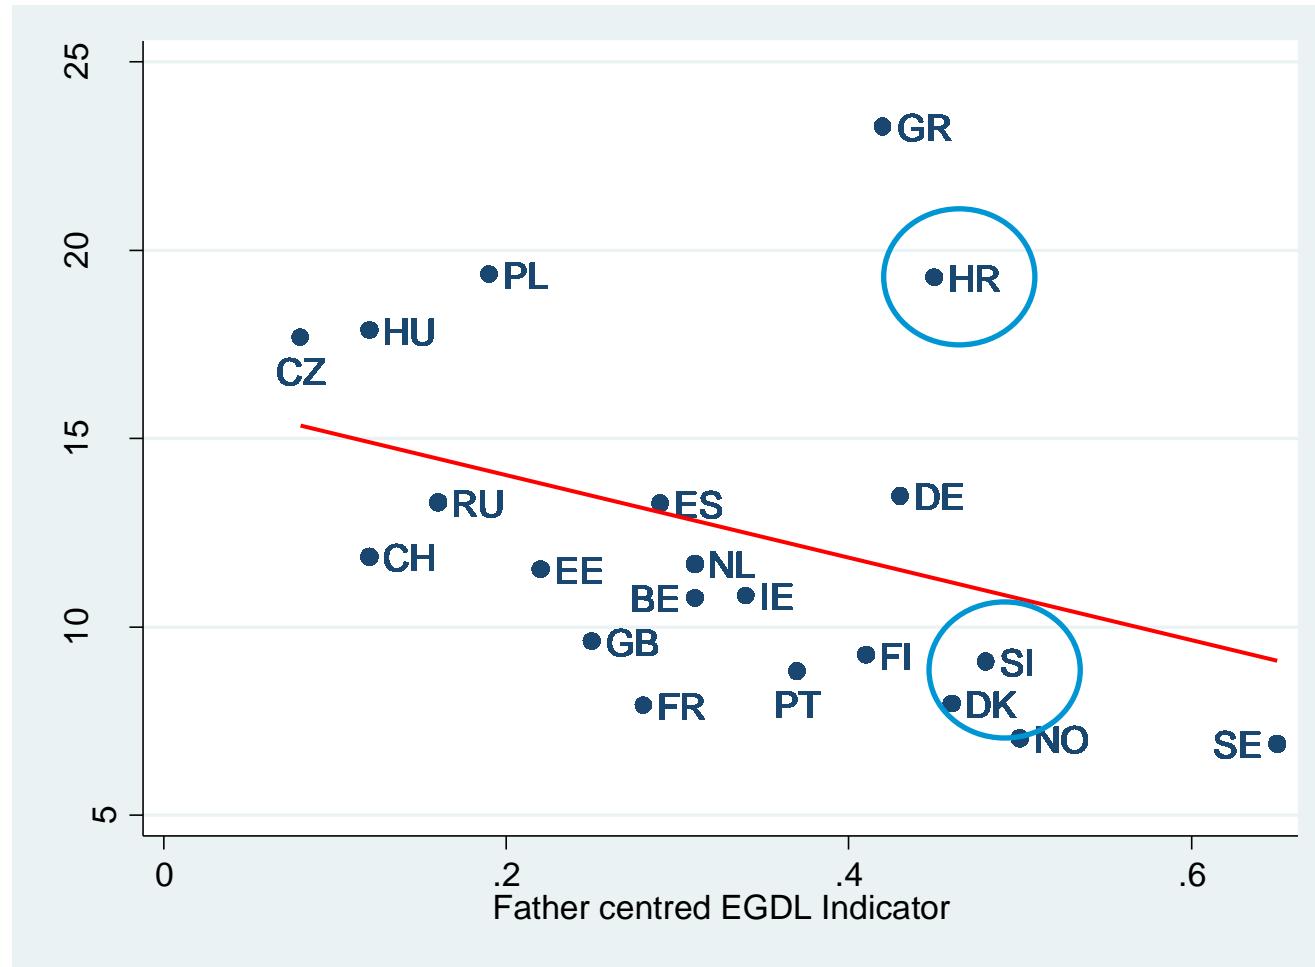

# Total Gender Gap in Housework and Father EGDL

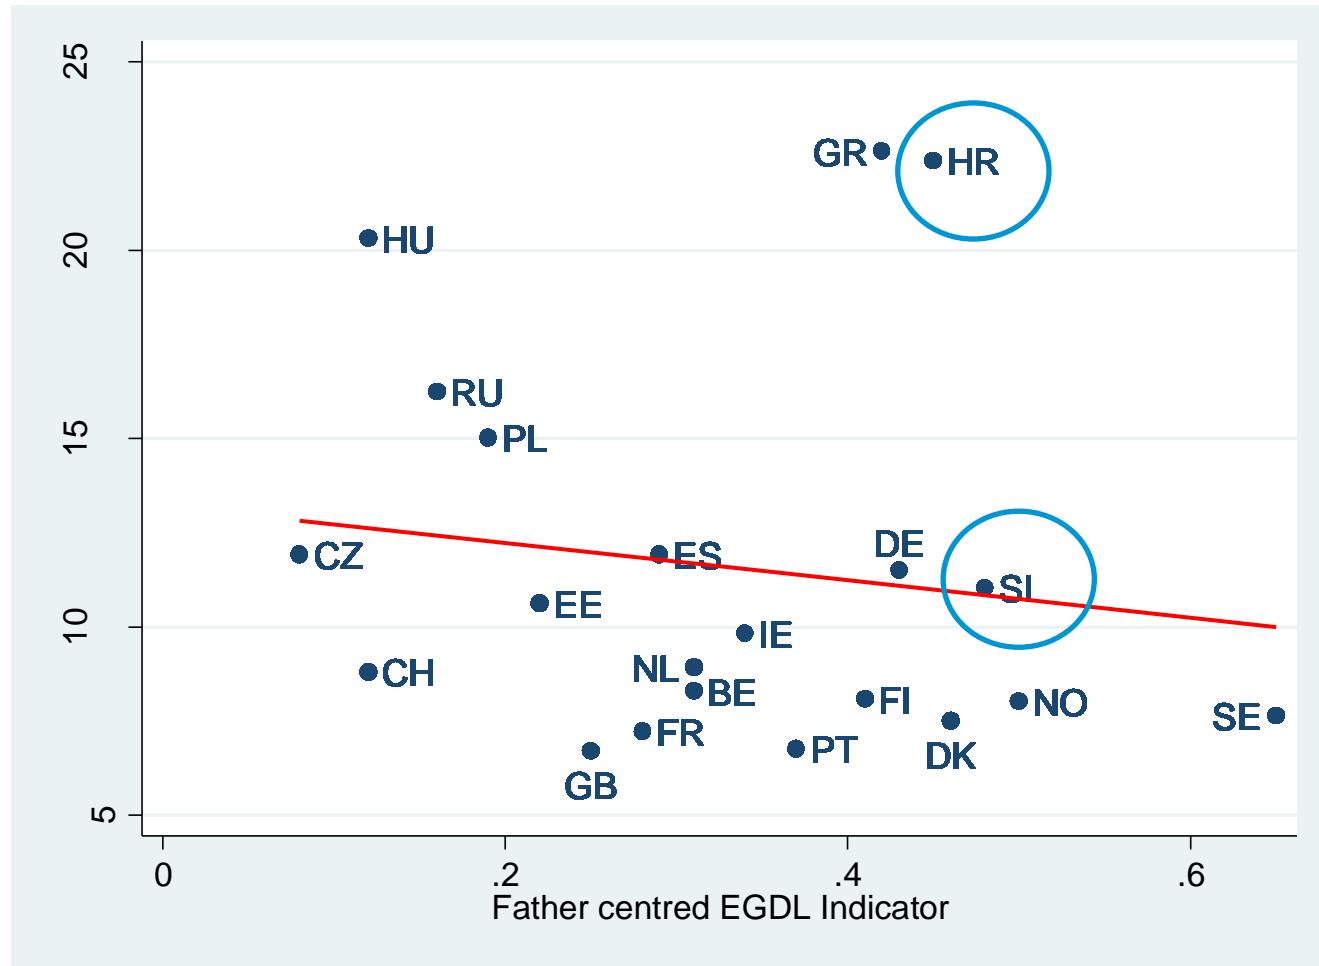

# Unexplained Gender Gap in Housework and Father EGDL

# Total Gender Gap in Housework and Father EGDL

# Unexplained Gender Gap in Housework and Father EGDL

# Conclusions

- There is a systematic relation between leave policies and the division of housework: negative relation for the baseline and father EGDL-measure & fathers' leave
- I find a positive relation btw. paid leave and housework
- There is no systematic relation between the total duration of leave and mother-centred EGDL indicator
- So, at least when looking at housework, it matters what indicator is used when aggregating leave policies
- Multidimensional measures accounting for fathers leave might be the stronger indicators if we intent to aggregate leave policies with regard to their gendered structures.
- Considering the distribution of individual characteristics changes the results, it is important to account for them!
